## INTRODUCTION

# The Real Reason Growth Stalls

If you think you need to hire your way out of your current growth plateau, you are about to waste somewhere between \$150,000 and \$500,000.

**Not because hiring is wrong. Because the hire will not fix what is broken.**

You built something real. Your company has clients, revenue, a team that shows up, and a product or service the market values. You have done what most entrepreneurs only dream of.

**And yet something does not add up.**

Revenue is growing but so is headcount. Every dollar of growth seems to require another hire. Your sales cycle takes longer than it should and nobody can explain why. Marketing generates leads that sales says are unqualified. Client onboarding is inconsistent. Your CRM is half-empty. You spend Sunday evenings building reports because the data in your tools does not tell you what you need to know.

You have tried to fix this. Maybe you hired a marketing agency that delivered beautiful reports full of vanity metrics but could not connect activity to revenue. Maybe a CRM consultant configured your system by the book, but the team abandoned the process within weeks. Maybe you have attended masterminds that gave you inspiration but zero implementation.

"The gap between where you are and where you want to be is not effort. It's systems."

The companies that compete against you, the ones growing faster with seemingly less effort, are not smarter or working harder. They have something you do not:

operational maturity. A revenue system where marketing, sales, and client success function as one connected machine, not three departments pointing fingers at each other.

The good news is that operational maturity follows a predictable path. There are four stages, and the moves that take you from Stage 1 to Stage 3 are known, documented, and executable in 12 to 24 months. This playbook maps that path.

Over the next six chapters, you will learn the operational changes that allow companies like yours (\$3M to \$15M, 15 to 75 employees) to grow revenue 20 to 40% without proportionally growing headcount. Each chapter addresses one cluster of capabilities. You will learn what the problem looks like, why it matters, how to recognize it in your own company, and what advancement looks like.

*Who this playbook is for. You are a founder or CEO running a B2B or service business between \$3M and \$15M in annual revenue with 15 to 75 employees. Revenue is growing but every dollar of growth requires another hire. You want to build the operational foundation that makes growth efficient, predictable, and capital-effective.*

Want to see exactly where you stand?

The [Revenue Growth Scorecard](#) takes 5 minutes and shows which of the 4 maturity stages is your current bottleneck.

## THE FRAMEWORK

# The Four Maturity Stages

Revenue operations maturity is not determined by company size or revenue. A \$2M company with a functioning system is more mature than a \$10M company that has never defined a pipeline stage. Maturity is determined by what the business is able to do operationally. The four stages below define the observable criteria that place a company on the spectrum.

## STAGE 01

### Reactive

Revenue depends on the founder's personal effort, relationships, and judgment. Nothing is consistent without the founder directly involved. Every new dollar requires personal attention.

*You are Stage 1 if: there is no consistently used CRM, no documented sales process the team follows, and no shared definition of your ideal customer.*

## STAGE 02

### Repeatable

A system exists that the team can follow without the founder in every deal. But data is not fully trusted, the forecast still relies on intuition, and growth still feels effortful.

*You cross into Stage 2 when: the CRM is used consistently by everyone who touches customers, at least one core process is documented and followed by the team, and basic pipeline visibility exists.*

---

### STAGE 03

## Predictable

The business runs on trusted data. A reliable forecast means the founder knows what will happen before it happens. Growth no longer requires proportional headcount increase. This is the transformation target for most Modern BizOps clients.

*You cross into Stage 3 when: shared revenue definitions are enforced in the CRM, a forecast can be produced with under 20% variance, and leaders trust the dashboards without debating the numbers.*

---

### STAGE 04

## Compounding

The system improves itself. Leading indicators surface problems before they show up in revenue. Expansion grows without proportional new logo acquisition. The revenue function operates as a strategic asset.

*You cross into Stage 4 when: win/loss analysis updates qualification criteria systematically, expansion revenue is a proactive managed motion, and leading indicators catch problems before they surface in revenue.*

---

## SELF-ASSESSMENT

# Find Your Maturity Stage

Rate each statement honestly on a 1–5 scale. The results will tell you which stage you are in and which chapter of this playbook to read first.

1 Not at all true 2 Mostly false 3 Partially true 4 Mostly true 5 Completely true

- |    |                                                                                                                                                                                                  |           |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 1. | We have a written ICP with specific criteria that marketing uses to filter targeting and sales uses to qualify leads, and both teams would give the same answer about who our ideal customer is. | 1 2 3 4 5 |
| 2. | Every pipeline stage has documented exit criteria that require a buyer action, not a seller opinion, before a deal can advance.                                                                  | 1 2 3 4 5 |
| 3. | Our CRM is the system of record, used consistently by everyone who touches customers. Nobody maintains a parallel spreadsheet.                                                                   | 1 2 3 4 5 |
| 4. | Marketing and sales share a single, written definition of a qualified lead that both teams agreed to and follow today.                                                                           | 1 2 3 4 5 |
| 5. | We run a defined weekly pipeline review with a consistent agenda where deals are evaluated against stage criteria, not narratives.                                                               | 1 2 3 4 5 |
| 6. | New clients follow a standardized onboarding program with a defined first-value milestone regardless of who manages the account.                                                                 | 1 2 3 4 5 |
| 7. | Our revenue forecast for next quarter is within 20% based on a documented methodology, not gut feel or rep confidence levels.                                                                    | 1 2 3 4 5 |
| 8. | We know which marketing channels produce the clients with the highest LTV, and we allocate budget accordingly.                                                                                   | 1 2 3 4 5 |

|     |                                                                                                                                        |           |
|-----|----------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 9.  | Our monthly revenue reporting comes from one trusted dashboard. No leader brings a competing spreadsheet to a review meeting.          | 1 2 3 4 5 |
| 10. | I can state our customer acquisition cost and LTV:CAC ratio by channel right now, without pulling a report.                            | 1 2 3 4 5 |
| 11. | At-risk clients are identified by a health score before they give notice, not after.                                                   | 1 2 3 4 5 |
| 12. | Revenue from existing clients (expansion plus renewal) is tracked separately from new logo revenue and has a dedicated owner.          | 1 2 3 4 5 |
|     |                                                                                                                                        |           |
| 13. | Win/loss analysis runs at least quarterly and has changed our qualification criteria or competitive positioning in the last 12 months. | 1 2 3 4 5 |
| 14. | Revenue per employee has improved year over year for the past two years, without a change in pricing.                                  | 1 2 3 4 5 |
| 15. | We model revenue scenarios 12 months out with explicit driver assumptions that leadership and finance both use for planning.           | 1 2 3 4 5 |
| 16. | Net revenue retention exceeds 100%. Our existing clients generate more revenue each year without new logos compensating for churn.     | 1 2 3 4 5 |

## YOUR RESULT

# What Your Score Tells You

Add up your scores. Maximum is 80. Find your total below to see your current maturity stage and where this playbook says to focus first.

|                                 |                                                                                                                                                                                                                          |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16 – 35<br>Stage 1: Reactive    | Your revenue engine is founder-dependent. Start with Chapters 1 and 2. Fixing the ICP and pipeline alone typically recovers six-figure revenue leakage within 90 days.                                                   |
| 36 – 50<br>Stage 2: Repeatable  | You have the basics in place but Stage 2 systems are incomplete or inconsistent. Chapters 3 and 4 are your highest-leverage work. Most companies here unlock 15–25% revenue growth by closing 2–3 specific Stage 2 gaps. |
| 51 – 65<br>Stage 3: Predictable | You're operating a consistent system. Chapters 5 and 6 are where the next wave of value sits. Focus on revenue per employee and unit economics to turn growth into a compounding asset rather than a linear effort.      |
| 66 – 80<br>Stage 4: Compounding | You're operating at or near best practice. The full audit engine assessment will find your edge cases. Use the scorecard to identify which Stage 4 competencies are still at a 3 or below.                               |

Want a deeper read? The [Revenue Growth Scorecard](https://modernbizops.com/scorecard) at [modernbizops.com/scorecard](https://modernbizops.com/scorecard) analyzes your answers against benchmarks and produces a competency heat map showing your exact stage and the 3 highest-leverage gaps.

# 1

## STAGE 1

# Define Your Ideal Customer

*Stop selling to everyone. Start winning the right ones.*

**COMPETENCIES** ICP Definition · Lead Qualification

---

## The Operational Problem

Walk into most \$3M–\$15M companies and ask anyone on the sales team who their ideal customer is. You'll get four different answers. Marketing is targeting one persona, sales is chasing whoever responds, and the founder is taking calls with anyone willing to book one. There's no shared, written definition of who you're for, and no explicit list of who you're not for.

The cost shows up in hidden places. Deals take longer because the wrong buyers keep advancing past the first meeting. Delivery teams are constantly surprised by clients who need more than expected. Churn concentrates in one segment that everyone knew was a weak fit. The business grows, but the margin doesn't.

## Why It Matters

Without a precise ICP, every part of the revenue system runs at reduced efficiency. Marketing targets the wrong people and measures success by volume. Sales works deals that will never close, or closes deals that will churn. Onboarding gets harder because client needs vary wildly. You can't optimize a system that starts with the wrong inputs. The ICP is not just a marketing document. It is the filter through which every revenue decision passes. Companies that encode it in their CRM and enforce it in qualification see win rates climb 20–40% within two quarters, without changing anything else.

### **SIGNS YOU HAVE THIS PROBLEM**

- Your team would give four different answers if asked to describe your ideal customer
- A meaningful share of your clients take significantly more service hours than expected
- You've closed deals you knew were weak fits because you needed the revenue
- Marketing and sales are targeting different types of buyers
- Churn concentrates in a recognizable segment but you keep selling to them anyway

## What the Solution Looks Like

A written ICP with specific, observable firmographic and behavioral criteria, including an explicit disqualification list. The criteria are derived from closed-won cohort data, not from the founder's intuition about who should be a good fit. The ICP is encoded in CRM scoring, used by marketing to filter targeting, and used by sales to qualify inbound leads. Both teams agree on what qualified means, and disqualification reasons are captured in the CRM so the model improves over time. A functional ICP is the root competency of a mature revenue system. Everything else degrades without it.

### **RIVERLINE GROUP: IN PRACTICE**

**Deal size +31% in two quarters. Same team, same market.**

Riverline Group, an \$8M B2B services firm, was selling to anyone who could pay. About 40% of their clients required more than twice the expected service hours. An ICP analysis against two years of closed-won data identified three firmographic patterns that consistently predicted high-LTV clients: companies with dedicated operations staff, contract values above \$85K, and no existing fractional ops support. After encoding these criteria in CRM scoring and using them to disqualify inbound leads, Riverline's average deal size increased 31% within two quarters. They stopped chasing business that consumed their margin.

# 2

## STAGE 1 2

# Make Your Pipeline Inspectable

*Replace gut instinct with buyer-verified stage gates.*

**COMPETENCIES** Pipeline Stage Design · Revenue Forecasting

---

## The Operational Problem

Your top salesperson closes deals at three times the rate of your average rep. Nobody knows why. Pipeline reviews are 45-minute storytelling sessions where reps narrate their deals rather than reporting against objective criteria. The forecast misses by 30% six quarters running. When you ask what stage a deal is in, you get a number. That number reflects how the rep feels about the deal, not what the buyer has actually done.

The pipeline is not inspectable. Which means it is not improvable, not coachable, and not forecastable.

## Why It Matters

A sales process you can't inspect is a sales process you can't improve. If every deal follows a different path, whether to close or to loss, you have no way to identify which stage is bleeding the most revenue, which reps need which coaching, or what the business will actually produce next quarter. Inspectable pipelines produce reliable forecasts. Reliable forecasts produce confident hiring, investment, and capacity decisions. The value compounds: once stage exit criteria are buyer-action based, cycle times compress because reps stop advancing deals before the buyer is ready.

### SIGNS YOU HAVE THIS PROBLEM

- Pipeline reviews are narratives. Reps tell stories about deals instead of reporting stage criteria
- Top performers close at 2-3x the rate of average performers and nobody can articulate why
- Your revenue forecast is wrong by more than 20% more than half the time
- New sales hires take four or more months to close their first deal
- You can't assess a deal's health without asking the rep what's happening

## What the Solution Looks Like

A stage-gated pipeline where every stage transition requires a verified buyer action, not a seller opinion. 'Proposal sent' is not an exit criterion. 'Economic buyer confirmed the decision timeline on a call' is. Each stage has documented entry criteria, required activities, and exit criteria that are objective and checkable. Combined with a documented forecast methodology that uses historical conversion rates rather than rep confidence levels, the pipeline becomes the primary tool for revenue decisions rather than a reporting artifact reviewed once a week.

### RIVERLINE GROUP: IN PRACTICE

Sales cycle 58 to 34 days. Forecast variance from 30%+ to 12%.

Riverline's founder could describe every deal from memory. His two AEs staged deals based on confidence, not buyer behavior. The result: a 58-day average sales cycle, an 18% close rate, and a forecast wrong by more than 30% in six of the last eight quarters. After mapping buyer-action exit criteria for each of their five pipeline stages and requiring champion confirmation before any deal advanced past Stage 3, the average cycle dropped to 34 days and close rate increased to 27%. The forecast became useful: accurate to within 12% the following two quarters.

# 3

## STAGE 2

# Build the Operating Rhythm

*End the blame game with shared definitions and a weekly cadence.*

**COMPETENCIES** GTM Operating Cadence · Shared Definitions & SLAs · Marketing-Sales Feedback Loop

---

## The Operational Problem

Marketing is measuring MQLs. Sales is measuring pipeline. The two numbers never agree. Every quarterly review starts with 20 minutes of debating whose data is right. Marketing defines a qualified lead one way; sales defines it another. There is no written agreement between the two. The weekly sales call has no consistent agenda and produces no decisions. Problems surface at the quarterly review, not two weeks before they show up in the numbers.

## Why It Matters

Misalignment between marketing and sales is not a culture problem. It is a systems problem. Without shared definitions (for qualified, for pipeline stage, for lead source), the data from each function tells a different story and decisions get made by whoever assembled the most convincing spreadsheet. Companies with an aligned operating rhythm, one shared vocabulary with a weekly review cadence and shared KPIs, grow 15-25% faster than those without, according to Forrester. The compounding effect is real: every aligned quarter improves both functions' targeting and conversion.

### SIGNS YOU HAVE THIS PROBLEM

- Marketing and sales use different definitions of 'qualified lead'
- Revenue reviews start with disagreement about whether the numbers are right
- There is no regular cross-functional pipeline review with a consistent agenda
- Sales doesn't know what campaigns marketing is running this month
- Marketing doesn't know which of their sourced leads actually closed

## What the Solution Looks Like

A shared data dictionary documenting every revenue-relevant term: lead, qualified, pipeline stage, source. Agreed to in writing by marketing and sales. SLAs for lead response time, disqualification feedback, and campaign briefing. A weekly pipeline review with a standard agenda and required data inputs. A monthly cross-functional review where marketing sees close rates by source and sales sees upcoming campaign signals. The operating rhythm does not require more meetings. It requires the right meetings, with the right data, producing the right decisions.

### RIVERLINE GROUP: IN PRACTICE

#### Pipeline from top-performing channels doubled. Same ad spend.

Riverline's marketing and sales functions had never agreed on what qualified meant. Every quarterly review opened with the same argument. After establishing a shared data dictionary, two SLAs (4-hour lead response; 48-hour disqualification feedback), and a weekly cross-functional review where marketing saw CRM close rates by source, the definitions debate stopped. More importantly, marketing reallocated 40% of their content budget to the two channels producing closed revenue rather than just leads. Pipeline from those channels doubled within one quarter on the same total spend.

If any of this feels familiar...

# 4

## STAGE 2

# Fix the Post-Sale System

*Turn one-time buyers into retained, expanding clients.*

**COMPETENCIES** Sales-to-Service Handoff · Customer Onboarding & Activation · Customer Health Scoring

---

## The Operational Problem

The sales-to-delivery handoff is an email and a CRM note. The delivery team starts onboarding with a blank slate and spends the first two weeks asking questions that sales already answered. Onboarding varies by which account manager is assigned. Some clients have a structured first 60 days; others are essentially self-managing from week two. Churn surprises the team consistently. Nobody knew the client was unhappy until the cancellation notice arrived.

The post-sale system is reactive, inconsistent, and dependent on individual effort rather than institutional process.

## Why It Matters

Acquiring a new client costs 5 to 7 times more than retaining an existing one. A 5% improvement in retention can increase profits by 25 to 95%. Yet most companies invest the majority of their growth budget in acquisition and almost nothing in what happens after the contract is signed. Every churned client represents not just lost revenue but the full acquisition cost of replacing them. Worse, the clients who leave because of a poor handoff or inconsistent onboarding often tell others. The fastest path to capital-efficient growth is not always more leads. It is keeping and expanding the clients you already have.

### SIGNS YOU HAVE THIS PROBLEM

- Clients repeat information in onboarding that they already gave during the sales process
- Onboarding quality varies significantly depending on who manages the account
- You find out a client is unhappy when they give notice, not before
- Annual churn is above 15% and the causes feel random
- Expansion revenue happens by accident, not by a defined motion

## What the Solution Looks Like

A structured handoff document completed by the AE before every deal closes in the CRM covering goals, stakeholders, commitments made, and implementation requirements. A documented onboarding program with a defined first-value milestone and a timeline target for reaching it. A health scoring model with defined inputs (engagement frequency, milestone completion, support ticket volume) that produces a score reviewed monthly. Accounts below a defined threshold trigger a proactive check-in. Together, these three components transform post-sale from reactive firefighting into a systematized retention and expansion function.

### RIVERLINE GROUP: IN PRACTICE

Annual churn 19% to 9%. The fix cost less than one churned client.

Riverline was losing 19% of clients per year. A cohort analysis showed that 71% of churned clients had never completed their defined onboarding milestones in the first 60 days. Nobody had been tracking that. The handoff from sales to delivery was an email. After implementing a structured handoff document, a 45-day onboarding program with a defined first-value milestone, and a monthly health score review, annual churn dropped to 9% within two quarters. The cost of implementing the system was lower than the revenue recovered from a single retained client at their average contract value.

# 5

## STAGE 2 3

# Automate Before You Hire

*Recover capacity through AI and automation before adding headcount.*

**COMPETENCIES** Tech Stack Rationalization · Revenue Automation & AI · Revenue Per Employee

---

## The Operational Problem

Your revenue team is using somewhere between 8 and 15 software tools. Most are poorly configured. At least two do the same thing. Three are actively distrusted. The CRM is half-empty because salespeople see data entry as an administrative burden rather than a selling asset. When you pull a monthly revenue report, someone has to spend 45 minutes reconciling numbers from three different systems.

The team feels at capacity. The obvious solution is to hire. But nobody has measured whether the team is at operational capacity or just at administrative capacity. Those are very different problems with very different solutions.

## Why It Matters

Revenue per employee is the metric that separates companies that compound from companies that just grow. If every dollar of new revenue requires a proportional dollar of new salary, the business is not becoming more valuable. It is just getting larger. AI amplifies the operational state it is applied to. Automating a broken process produces broken outcomes faster. Deploying AI scoring before data quality is established produces unreliable scores. The sequence matters: rationalize the stack, establish data quality, then automate. Companies that follow this sequence recover 6–10 hours per rep per week in administrative time. That capacity goes back into revenue-generating work without a single hire.

### SIGNS YOU HAVE THIS PROBLEM

- The team maintains spreadsheets alongside the CRM because they don't trust the CRM data
- CRM data completion is below 80% on required fields
- Revenue reporting requires manual reconciliation across more than one system
- AEs spend more than 2 hours per day on CRM updates, status reports, or internal prep
- You're paying for tools that fewer than half the team actively uses

## What the Solution Looks Like

An annual tech stack audit that maps every tool to a defined capability need, identifies redundancy, and produces a rationalization recommendation. A data governance framework with required CRM fields enforced at each pipeline stage. An automation layer covering the five most repetitive revenue tasks: CRM activity logging, deal stage updates from meeting transcripts, lead routing, follow-up sequencing, and reporting assembly. AI copilots that capture call notes and enrich contact records automatically. The goal is measurable: revenue per employee improves year over year, which means the business is generating more revenue from the same number of people.

### RIVERLINE GROUP: IN PRACTICE

Revenue per employee +23%. Annual revenue target hit with zero new revenue hires.

Riverline's AEs were spending an estimated 11 hours per week on CRM updates, status reports, and internal meeting prep. None of it revenue-generating. A tech stack audit found three overlapping tools and two that fewer than 30% of the team actively used. After consolidating to a rationalized stack, deploying an AI meeting-summary tool that auto-logged call notes and updated deal stages, and automating five repetitive CRM workflows, each AE recovered roughly 8 hours per week. Revenue per employee increased 23% the following year. Riverline hit their annual revenue target without making a single revenue-team hire.

# 6

## STAGE 3

# Reach Predictable Revenue

*Measure what makes your business more valuable, not just bigger.*

**COMPETENCIES** Revenue Reporting Infrastructure · Unit Economics · Growth Scorecard

---

## The Operational Problem

You know your revenue. You do not know your customer acquisition cost by channel. You have never calculated your LTV:CAC ratio. Your revenue report exists, but three leaders would bring three different spreadsheets to a board meeting. The business feels healthy, but you cannot prove it with a single dashboard in five minutes.

When a prospective investor or acquirer asked Riverline to demonstrate the health of their revenue engine, assembling the data took six weeks and produced three different CAC numbers depending on who built the model. This is a Stage 2 problem pretending to be a Stage 3 business.

## Why It Matters

The difference between a company valued at 3x revenue and one valued at 8x revenue is almost never the revenue itself. It is the operational metrics beneath it. Predictable revenue, efficient acquisition, strong retention, and high revenue per employee signal a business that scales without proportionally scaling cost. These metrics are not just for companies planning to sell. They are the metrics that tell you whether your growth strategy is working, where to invest next, and when to change course. Without a growth scorecard, you are managing by lagging indicators. You are responding to last quarter's results instead of this month's leading signals.

#### **SIGNS YOU HAVE THIS PROBLEM**

- You know your revenue but cannot state your customer acquisition cost without pulling a report
- Different leaders bring different revenue numbers to the same meeting
- You have never calculated your LTV:CAC ratio or revenue per employee
- Reporting is backward-looking, showing last quarter's results rather than this month's trajectory
- If asked to prepare for an investor or acquisition conversation, it would take weeks to assemble the data

## What the Solution Looks Like

A unified revenue dashboard covering the metrics that actually determine business value: new pipeline creation rate, win rate, expansion rate, gross retention, net revenue retention, customer acquisition cost, LTV:CAC, payback period, and revenue per employee. CAC and LTV calculated by acquisition channel, not just at the company level, so investment decisions can be made from data rather than channel preference. A growth scorecard that is the single executive-level view of revenue system health, used as the primary reference in every board conversation. When the metrics are clean, trusted, and accessible, the business is manageable in a way it simply was not before.

#### **RIVERLINE GROUP: IN PRACTICE**

Due diligence prep: six weeks to three days. Valuation reflected operational maturity.

After implementing a unified revenue dashboard and calculating CAC and LTV:CAC by acquisition channel, Riverline's next investor conversation took three days to prepare for instead of six weeks. Their net revenue retention was 112%. Their LTV:CAC on their best channel was 4.8x. Their revenue per employee had improved for two consecutive years. The business was valued at a multiple that reflected its operational maturity, not just its revenue size. The work was not done for the investor. It was done to run the business. The investor conversation was just where it became visible.

# The Maturity Model on One Page

| Stage             | You are here when...                                                                    | Primary work                                                                | Exit signal                                                                         |
|-------------------|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 01<br>Reactive    | Founder owns every deal. No consistent CRM use. No shared ICP.                          | Define ICP. Design pipeline stages. Establish CRM governance.               | CRM used consistently. Pipeline stages have exit criteria. ICP is written.          |
| 02<br>Repeatable  | Team follows the process. CRM is the record. Basic pipeline visibility exists.          | Operating cadence. Post-sale system. Alignment SLAs. Automation foundation. | Forecast within 20%. Onboarding is standardized. Marketing-sales aligned.           |
| 03<br>Predictable | Leaders trust the data. Forecast reliable. Decisions made from dashboards.              | Unit economics by channel. Revenue per employee. Growth scorecard.          | NRR tracked. CAC/LTV calculated by channel. Scorecard is the board view.            |
| 04<br>Compounding | System improves itself. Expansion proactive. Leading indicators surface problems early. | Win/loss loop. Expansion plays. Scenario modeling. AI-powered intelligence. | NRR exceeds 100%. Revenue per employee improves YoY. Forecast uses leading signals. |

## CONCLUSION

# Your Next Step

The maturity path is not complicated. It is just sequential. You cannot build a reliable forecast on an uninspectable pipeline. You cannot build an inspectable pipeline without a shared ICP. You cannot automate before the data is trustworthy. The work has to happen in order.

Most companies stall at Stage 2. They have the basics in place: a CRM, a sales process, a rough onboarding program. But the system is not tight enough to produce the forecast accuracy, retention rates, or revenue per employee that make growth capital-efficient. Getting from Stage 2 to Stage 3 is the single highest-leverage transformation available to a \$3M-\$15M B2B company.

The fastest path is a structured assessment followed by a coaching engagement targeting the 3 to 5 competencies with the highest revenue leverage for your specific situation. Not a generic consulting project. A sequenced, measurable engagement where every targeted competency has a defined advancement target and a business outcome it produces when it advances.

Most Modern BizOps clients advance 4-6 competencies in 16 weeks. The average revenue impact in the first year is 20-35% growth without a proportional increase in headcount.

If you scored below 50 on the self-assessment, the [Revenue Growth Scorecard](#) is the right starting point. It takes 5 minutes, analyzes your answers against benchmarks, and shows you the 3 highest-leverage competency gaps for your stage. Free, no call required.

If you scored 50 or above and want a structured path forward, [book a free discovery call](#). We will map your current stage, identify your highest-leverage gaps, and show you what a Modern BizOps coaching engagement would target. No pitch. Straight

assessment.

## ABOUT THE AUTHOR

# Bradley de Wet

---

Bradley de Wet is the founder of Modern BizOps and a revenue operations practitioner with 15 years of operator experience across SaaS, professional services, and VC-backed growth companies. He spent the core of his career at Contactually, a CRM company later acquired by Compass, where he built and ran the Account Executive team, the Customer Onboarding program, and the Premium Services function. He has built revenue systems for companies at every maturity stage described in this playbook. Modern BizOps coaches \$3M–\$15M B2B founders through the Stage 1 to Stage 3 transformation: from reactive, founder-dependent revenue to a predictable, capital-efficient growth engine. The methodology in this playbook is the framework every engagement is built on.
